**Subject:**

The squirrel and the bird feeder.

**Notes:**

Bought a squirrel resistant bird feeder on line from the National Trust.I was hoping to encourage small birds to come to the garden so that I can photograph them (and because I love to birds in the garden). The squirrels in fact have no problem with the feeder, they eat what they want and discard what they don't. The discarded seeds and husks are then eaten by pigeons. The feeder was also supposed to be resistant to larger birds like crows and pigeons but they now have this symbiotic relationship with squirrels.

The approach route at this time was along the fence from the park then a leap to the hanging basket attached to next doors garage wall. From here they could leap to bird feeder itself.
